

Soil Activator

Modern soil microbiologists make it clear that soil fertility is not the result of adding synthetic nutrients. Instead, good soil is the result of a dynamic, aerobic microbial environment in the soil. Scientists report that soil is *alive*, truly and literally alive.

What's more, such microbiologists contend that no amount of synthetic "plant food" will give the equivalent of a fertile soil without giving attention to the humus-forming and plant-supporting microbes. In essence, the experts are saying, "**the plant eats what the microbes give it.**"

It has been taught and has become common practice that to maintain healthy soil, one must maintain proper nitrogen, phosphate and potassium levels. Through the years, good management of the natural biological systems of the soil has received less and less attention.

Natural Guard Soil Activator can restore your soil to a living system of energetic biological activity. Made from natural occurring **humates**, beneficial soil bacteria, and humic acid, this product helps maintain your soil's natural cycle.

It contains NO SYNTHETICS, NO SEWAGE SLUDGE, and NO ANIMAL MANURE. Natural Guard's humate material provides essential plant nutrients in a natural slow-release form that feed the soil microbes, which results in a more energetic soil.

The soil is opened up biologically. **The result:** Improved growth, deeper penetration of the root system, vigorous color, improved water holding capacity and aeration. With regular use, your soil will steadily improve. Good soil gets even better and marginal soil improves significantly.

Using **Natural Guard Soil Activator** together with a good fertilization program will reward you with steady improvement in your soil's fertility and, at the same time, decrease the incidence of disease, stress, and soil borne infections. With use, you can expect healthy, tillable soils rich in organic matter.

Use it everywhere: Lawns, Vegetable Gardens, Flower Beds, Trees and Shrubs!
